

QUESTION BANK

1. Explain the various types of programming languages, providing suitable examples. (U)
2. Draw a flowchart and write an algorithm to find the largest of three numbers. (A)
3. Explain the basic structure of a C program with a neat diagram. (U)
4. Differentiate between constants and variables in C with examples. (U)
5. Describe the different data types available in C, along with their sizes. (R)
6. Explain operators in C. Give examples of arithmetic, relational, and logical operators. (U)
7. Discuss the precedence and associativity of operators with an example expression. (An)
8. Explain formatted input/output functions in C with examples (scanf(), printf()). (U)
9. Write a note on implicit and explicit type conversion with examples. (U)
10. Explain various types of declarations and statements in C with suitable examples. (R)
11. Explain the working of if, if...else, nested if, and ladder if...else with examples. (U)
12. Write a short note on the conditional (?:) operator with an example. (U)
13. Explain the switch statement in C. What are its advantages over if...else? (An)
14. Discuss the purpose of the goto statement. Why is it not recommended? (E)

15. Explain the syntax and working of while, do...while, and for loops with examples. (U)
16. Differentiate between entry-controlled and exit-controlled loops with examples. (An)
17. Write a program in C to print the multiplication table of a given number using a loop. (A)
18. Explain the concept of nested loops with an example program. (U)
19. Write a note on loop control statements (break, continue) with examples. (U)
20. Write a C program using a loop to calculate the sum of the digits of a given number. (A)
21. Define an array. How is memory allocated for a 1-D array in C? (R)
22. Write a program to input and display elements of a 1-D array. (A)
23. Explain 2-D arrays in C with syntax and an example program. (U)
24. Write a C program to add two 2-D matrices. (A)
25. Explain multi-dimensional arrays with an example. (U)
26. Explain the declaration and initialization of strings in C. How are strings stored in memory? Give an example. (U)
27. Explain string storage in C. How are strings different from character arrays? (An)
28. Discuss string handling functions (strlen, strcpy, strcat, strcmp) with examples. (U)
29. Write a C program to check whether a given string is a palindrome or not. (A)
30. Write a program in C to sort an array of integers in ascending order. (C)
